

# FASTEST

## Test Automation and Test Management Solution

No technical skills needed, high coverage, return on investment within the first year

### The challenge

Project managers and QA teams face the challenge to rapidly test complex, integrated applications within very short time spans. Often budgets and test time frames are very tight and professional test capacity is not available at the right time.

### The solution

FASTEST is a complete test management solution. This allows QA teams to manage and control both automated and manual test cycles. FASTEST gives you a single point from which to coordinate all of your test projects. With the ability to coordinate both manual and automated tests you get the test data you need to make release decisions. FASTEST enables you to create and execute (automated) extensive (up to 1,000) test cases with minimal effort.

### The advantages

- Coordinate, manage and control all testing from a single dashboard: manual and automated testing.
- Automate your entire testing end-to-end and achieve maximum efficiency and flexibility.
- Less human test capacity is required.
- Prevents continuous repetition of manual testing with the possible result of human errors such as missing defects during the test execution.
- Integration testing and business process testing across the whole chain of applications: end-to-end testing across all applications and services.
- Highly maintainable and repeatable tests that utilize reusable test assets.
- Saving time and free up resources by building and maintaining in an efficient manner.
- Enables 24x7 automated testing without the need of present resources, resulting in higher test coverage.
- Enforcing consistent and disciplined documentation and execution of ISTQB or T-Map based test projects.
- FASTEST supports a wide variety of web and non-web (rich client) applications testing, including Oracle, SAP, Salesforce. Also FASTEST allows on device testing for Android, iOS, Windows Mobile and Blackberry.

### FASTEST: Simply Sure

Even though FASTEST features all the functionality you would expect from a test solution, all functionality is designed to be used on the level of Business Administrators without the need of programming skills.

# FASTEST

## Test Automation and Test Management Solution

Automate and manage your testing efforts and achieve maximum productivity directly

### Why FASTEST?

#### Experience

FASTEST is developed by QA consultants with years of experience in automated testing solutions who have key positions in a vast variety of QA roles. The lessons learned regarding test management, test coordination and test automation have been combined into FASTEST: an integrated test management solution that is far ahead of any product available today.

**Sprint and Release Management**

**Requirement Management**

**Test Case Library**

**Test Script Library**

**Defect Management**

**Extensive Reporting**

#### Fast ROI

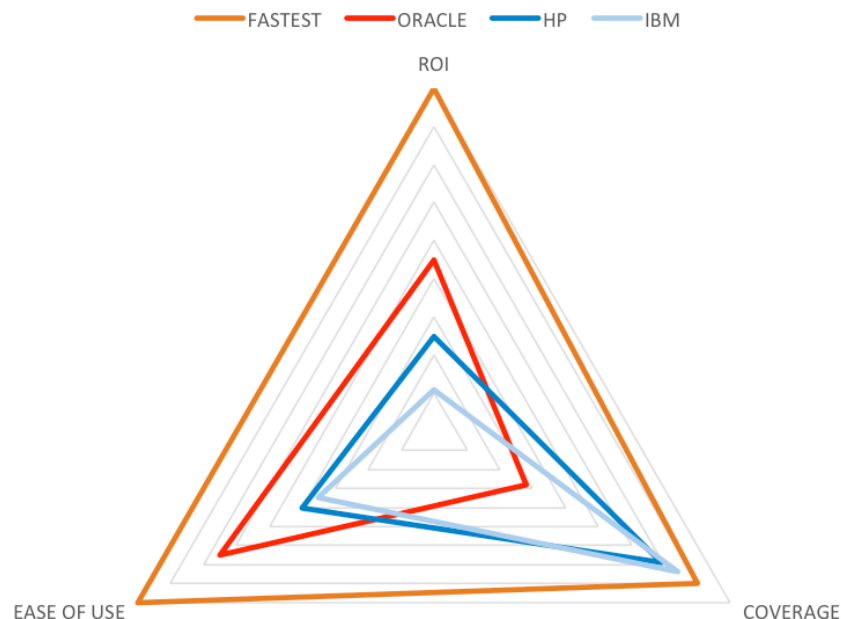

The ROI of an automated test solution depends on many different variables. However, a two-month ROI has been demonstrated using various QA scenarios. The intuitive point-and-click logic with no programming skills needed enables QA team members to implement and execute data-driven test scenarios within hours.

#### Learning curve

Unlike many automated testing solutions, FASTEST users are able to compose comprehensive test scripts within a few clicks without any programming skills needed.

With limited instruction time, even end-users compose test scripts and test scenarios with limited instructions.

### Test Automation Solutions Comparison

# FASTEST

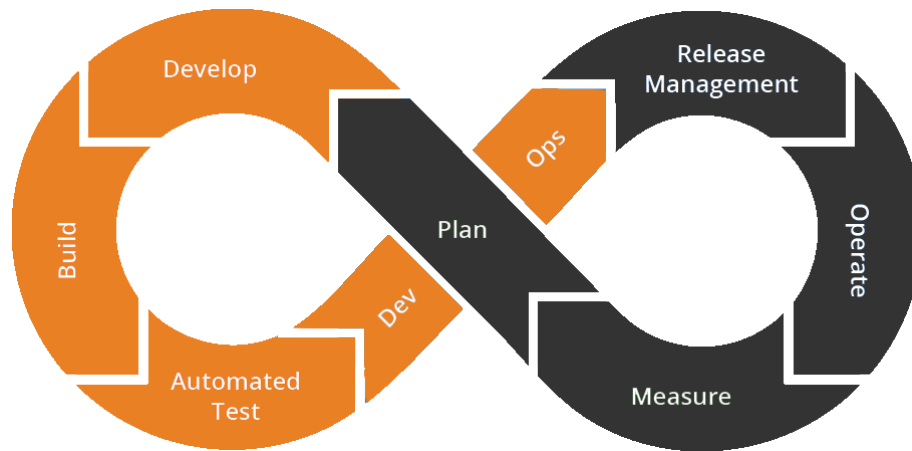

## Test Automation and Test Management Solution

Integrate and collaborate with extensive standard continuous integration and delivery connector

### Continuous Integration and Delivery

#### Extensive integration

Transferability and representation by 2-way interfaces to several CI/CD solutions like Bamboo, CircleCI, Jenkins, Solano CI, Travis and Team Foundation Server.

#### Issue Management Integration

Integrate with external issue management systems like Jira, Redmine, TOPdesk, Rally, HP and IBM. Automate workflows with our 2-way smart workflow synchronization.

### Licensing models

Use FASTEST from cloud, private cloud, hybrid or on-premise choosing one of our flexible licensing models:

#### CAPEX

Use FASTEST from cloud, private cloud, hybrid or on-premise with our Capital Expenditures (CAPEX) license model: Initial investment of the license and Annual Maintenance and Usage Fee.

#### OPEX

Use FASTEST from cloud, private cloud, hybrid or on-premise with our Operating Expenditures (OPEX) license model: Pay by the hour with a quarterly interval.
